

vStart Service – VMware Horizon

Designed to help your business evaluate the benefits of a Virtualisation for Mobile Workers

Overview

VirtuSys have experienced IT professionals that have been delivering Server Based and now Virtualisation solutions based on Virtualisation Technology for over 15 years. Our consultants fully understand that a Virtualisation infrastructure not only encompasses Servers, but now encompasses the entire datacentre.

The scope of end-user computing is expanding, as the workforce adopts more and more devices and platforms that provide mobility and productivity anywhere. For IT, the upshot is an increasingly complex and dynamic environment that's hard to administer with rigid PC-centric tools and processes. VMware® Horizon™ Suite moves IT beyond these limitations—with the technology and capabilities to securely deliver and manage robust end-user computing across all devices.

Key Benefits

This service offering will deliver the following:

- Accelerate your virtual desktop deployment
- Mitigate risk by leveraging experienced consultants and proven best practices
- Provide a configuration workshop in your own environment

Deliverables

- Standard on-site installation of up to five users
- Configure and deploy of 2 x View Users, 2 x Mirage users and Workspace Management
- Interactive workshop focusing on architecture, administration and operations
- Best practices and knowledge transfer

Duration & Scope

- Three (5) days onsite consultancy
- VMware Infrastructure Jumpstart will be delivered by a VirtuSys VMware Certified Professional (VCP) consultant

Roles & Responsibilities

- VirtuSys VMware Consultant: Conducts an initial workshop, provides outline design and best practice guide for Virtual Datacentre infrastructure
- Client Contact: works in conjunction with VirtuSys staff to plan and coordinate IT related functions
- Workshop Stakeholders required:
 - Client Project Manager: Plans and coordinates jumpstart-related IT functions
 - Client Systems Administrator: Responsible for server hardware, storage and networking
 - Client Server Administrator: Responsible for operating system and applications

Virtualisation is transforming the IT landscape and fundamentally changing the way that today's Data Centres are being built, deployed and managed. This form of computing based on Centralised resources (Servers, Network, Storage) gives your company the ability to deploy on x86 Server multiple, independent server / desktop workloads to agnostic hardware.

IT is tasked with embracing and supporting this new technology landscape while bringing it under the umbrella of corporate governance, security, and control. Horizon Suite gives IT the technology and the means—by transforming siloed desktops, applications, and data into centrally managed services, securely delivered to end-users on the devices of their choice.

About VirtuSys Limited

VirtuSys Limited provides businesses with access to industry leading experts in the field of Virtualisation. Our service portfolio are designed to offer a truly integrated suite of IT services to assist in the advice, design, deployment and support of IT requirements to meet our customers' business needs.
